Summary

Backend-leaning software engineer with eight years of experience building payment, logistics and data platforms in Go, TypeScript and Python. Known for turning slow, fragile services into fast, observable systems and for mentoring engineers through their first on-call rotations.

Experience

Senior Software Engineer, Northwind Logistics — San Francisco, CA — 03/2021 – Present

- Led the redesign of the shipment tracking service, cutting p95 latency from 820 ms to 140 ms for 2.4M daily requests.
- Introduced contract tests across 14 internal APIs, reducing integration incidents by 38% in two quarters.
- Built a carrier-rate ingestion pipeline in Go and Kafka that processes 60k rate updates per minute.
- Mentored 6 engineers; three were promoted within eighteen months.
- Drove the migration of 40 services from a self-managed cluster to Kubernetes on GCP, saving \$310k per year.

Software Engineer, Brightline Payments — Oakland, CA — 06/2017 – 02/2021

- Shipped the merchant payouts API used by 12,000 merchants, processing \$1.2B in annual volume.
- Reduced failed payout retries by 27% by adding idempotency keys and a dead-letter queue.
- Wrote the internal TypeScript SDK adopted by 9 product teams and maintained its release process.
- Cut CI build times from 22 minutes to 7 minutes with test sharding and dependency caching.

Junior Developer, Harbor Analytics — San Jose, CA — 07/2015 – 05/2017

- Maintained Python ETL jobs that loaded 300 GB of retail data into PostgreSQL each night.
- Automated weekly reporting for 25 enterprise clients, saving the support team 10+ hours a week.

Education

B.S. Computer Science, University of California, Davis — 2015

Coursework: distributed systems, databases, algorithms, computer networks.

Skills

Languages: Go, TypeScript, Python, SQL, Bash

Platforms: Kubernetes, GCP, AWS, Kafka, PostgreSQL, Redis, Terraform

Practices: API design, observability with OpenTelemetry, incident response, code review, technical writing

Projects

ratelimit-go — an open-source token-bucket rate limiter with 1,100 GitHub stars and 40 contributors.

Conference talk — "Retries Without Regret", GopherCon 2023, on designing idempotent payment APIs.
